The principal discharge from this proposed source is made into Calcasieu Pass via pipes and Calcasieu Ship Channel via pipes and local drainage, waters of the state classified for primary contact recreation, secondary contact recreation, propagation of fish and wildlife, and oyster propagation. During the preparation of this permit, it has been determined that this discharge will have no adverse impact on the existing uses of the receiving waterbody. As with any discharge, however, some change in existing water quality may occur.

The EAS submitted by the applicant addresses avoidance of potential and real environmental effects, balancing of social and economic benefits against environmental impact costs, and alternative sites, projects, and mitigative measures.
